Mr. Musa Haule (Founder/CEO)

vision

- To reduce plastic waste in a useful way
- To create job opportunity and hence poverty reduction
- To have environment free of plastic waste
- To minimize risk related to plastic waste

WASTE to WEALTH Project

Waste plastic into paving blocks

NEED ASSESMENT

There are increased usage of plastic materials as packages or kitchen and office wear. These are non degradable materials. Degradation of the plastic waste is very slow process.

Improper dispose of these waste such as into water bodies can result into killing of aquatic animals and terrestrial animals (i.e cows, goat).

Spreading of these waste pollutes environment and attracts breeding of very dangerous insect in Africa known as mosquito. These dangerous insect spread a disease known as Malaria which kills many people especially infants and pregnant mother

Currently, community do not know proper way of disposing these type of waste and they do not diagnose the impact related from it.

JUSTIFICATION

Plastic waste will be recycled into paving blocks and floor tiles. Use of this product will replace cement and reduce the cost of paving block when compared to that of convention concrete paving blocks. The project is helpful in reducing plastic waste in a useful way.

PROJECT OUT PUT

Utilization of plastic waste in a production of paving block will be a productive way of disposing plastic waste.

Plastic paving block is low cost, shows good heat resistance as compared to concrete paving block. This can be used in non-traffic and light traffic road.

Generally, plastic products includes plastic bottles, plastic films, domestic wears, office devices and plastic bags.

Due to food modernization, food processing industries now use plastic packages (known as

take away) as many customers prefers them. So, all soft drink industries. Have adopted for the sake of customers.

Since the government policy for industrialization, we predict how waste plastic product will pollutes our environment

in overall. On the other hand, it will be a serious problem since there is no alternative way to the use of plastic other than burning and throwing which affects our environment.

Use of plastic in Tanzania

CHILDREN VILLAGE PROJECT

Empowering children innovative knowledge for sustainable future development

CHALLENGES

Children aged 5-16 years lack good handling from their parents or care givers. They lack playing facilities for their brain development, insufficient balanced diet, moral training and thus results into poor academic performance and bad future generations.

Since children learn through hearing and seeing, what they normally see and hear is all about violence, sexual harassment, drug abuse, bad manners (i.e insult words, poor life skills) and alcoholic behavior from their neighbors. Some parents used to employ house maids who also make some violence against the children.

Since 30th August 2018 we established partnership with Ludewa Teachers Re-

sources Centre where we rented their building for conducting this program (English course and pre-form one). At year 2018 we enrolled 82 children while at year 2019 we enrolled 68 children. The capacity of the building that we rent is not enough to accommodate enrolled children.

We do not yet enroll other children (5-12 years) due to lack of building.

This program is conducted each year from early September to early December. We warmly welcome any donors with interest for this and future.

In each year it is about

70 children enrolled for this program.

JUSTIFICATION

The construction of buildings for CHILDREN VILLAGE PROJECT will enable us to enroll more children in need so that they acquire quality skills and knowledge a per our strategy into community development for poverty reduction.

We will be happy to see more donors who will be interested to support us in construction of buildings.

OUR STRATEGIES

During the project (September to December) children will be happy to play, sing, learn English, science and social sciences, inverting science into reality (acquiring practical skills), gifts, teaching aids and tools.

We invite any partners (such as teachers/facilitator) with interest for the children in this program. We will be happy if atleast 3 or 2 any foreign partners will be with us in this year program.

Quality Bakery

BACKGROUND

Ludewa District is one of the four districts in Njombe region whose population is 133,218 people (Tanzania National Census of Humanities and Housing, 2012). Local people from this area are involved in traditional fishing along the coast of Lake Nyasa basin, subsistence farming and livestock rearing and there are small amount of artisan of gold and gem quality green tourmaline.

OBJECTIVES

1. Poverty and hunger reduction through employment opportunities
2. Promoting community development through agribusiness
3. Improving consumer's health and promoting food security.
4. To satisfy the community demands for bakery and confectionery products.

PURCHASE OF BAKERY EQUIPMENTS

CREATING ECONOMIC DEVELOPMENT OPPORTUNITIES TO ENHANCE POVERTY AND HUNGER REDUCTION

PROBLEM

The demands for baked goods are increased each day. Baked goods/confectioneries have higher demands due to their texture, taste, health satisfactions, brands, packaging, overall acceptability due to the changes in lifestyle, economic growth, urbanization, education and globalization.

The higher demands for bread has experienced by people with problem in High Blood Pressure who advised to consume less or no sugary content.

Our organization has no enough fund to acquire the purchase of the equipment. Since June 2018, we request several partners and donors with no positive response.

JUSTIFICATION

The purchase of bakery equipment will enhance commencement of production of baked goods and solve community problems.

BILL OF QUANTITIES

Sn	Item Description	Quantity	Unit price	Total
1	Bread slicer	1	1,850,000	1,850,000
2	2layer, 4 tray gas deck oven	1	3,000,000	3,000,000
3	20L Planetary mixer	1	400,000	400,000
4	Transport to Ludewa		242,500	242,500
5	18%VAT		916,650	916,650
TOTAL				6,408,000

LUDEWA DEVELOPMENT GROUP

LUDEWA DEVELOPMENT GROUP

OUR PROGRAMMES

OUR BACK GROUND

Ludewa Development

Group (LUDEG) is the

registered Community Based Organization (CBO) with registration number LDC/GR/925 and its head quarter in Ludewa town. It is the active organization that promotes and assists development within Ludewa district in education, community health, social welfare and economic issues that support community so as to alleviate poverty.

LUDEG has linked with professional and experienced personnel in the field of *Agricultural sciences, Food technology, Agricultural economics and rural development*. It has already established active cooperation with other individuals, CBO's, NGO's, FBO's and Government institutions within Ludewa district in action to foster the development process.

LUDEG by contract may partner with these organizations to conduct research survey, Agribusiness value chain development, Project proposal writing, Project Report writing, Statistical data analysis and presentations and providing knowledge based education regarding project development.

COMMUNITY WATER SUPPLY IN MANDA VILLAGE

Improving community infrastructure for economic development

WATER SHORTAGE

Women and adolescent girls spend most of their time in searching for water. School girls (teens) are most vulnerable to this issue. This has resulted into poor academic performance to them. During searching for water, some adolescent girls and women were reported to have been raped. Due to the

lescent girls may fail to attend classes as they get

ity water. People in this communi-

ty depends water from Lake Nyasa where they directly fetch from that lake. This may resulted into disease outbreak. There are some seasonal rivers which have been reported to have dangerous animals such as crocodiles, hipopotomus and

distance for the sake of water, these ado-

tiredness or dirty resulted from loss of access of qual- snakes.
